

# Deepak Goyal

## Profile

I am a web developer, programmer and technology enthusiast with over 5 years experience base. I have a passion for learning and improving my skills each and every day and I often spend my free time learning since the world of web development moves so fast. I have mostly worked with Python PHP, Laravel and Javascript as well as a whole plethora of Javascript libraries and frameworks jQuery. I like to adopt a best practice approach to my work, so methodologies such as automated testing, code reviews, feedback and striving to create the best solution are important to me. Writing clean, understandable and maintainable code I feel are an important aspect of being a web developer.
